------------	------------------------

Dear Cook County Resident,

Under the leadership of Cook County Board President Toni Preckwinkle, Cook County strives to improve the environment and lower greenhouse gas emissions. We are doing that by actively working to reduce our energy and water usage and track this reduction through the benchmarking of our County Facilities. We are reporting on our efforts in the annual Benchmarking report.

Cook County uses the Department of Energy's Energy Star program to benchmark its facilities. Benchmarking can lead to an average energy use reduction of 2.4 percent, which is the equivalent of removing 1,246 cars from the road for one year¹. The County reduced energy usage by 4 percent from 2016 to 2017. This directly translates into reduced operating costs to more efficiently deliver the services you expect of your County government.

The following are highlights of the report.

- 52 percent of benchmarked facilities improved their Energy Star score
- 82 percent of benchmarked facilities lowered their energy use intensity (EUI)
- The County realized a 6 percent reduction in water usage

Benchmarking is key to the success of Cook County's Green Buildings Program, which aims to reduce the environmental impact of our County Buildings, incorporate smart building technology, and has a positive impact on communities throughout the County. The Green Buildings Program is composed of five pillars; Energy, Water, Waste, Technology and Community. These pillars act as a guideline for building, operating, and maintaining our County facilities.

Although we successfully reduced our energy and water usage from 2016 to 2017, there is continued room for improvement. In the coming year, the following projects are scheduled.

- Conducting an assessment to find water conservation measures at the Department of Corrections Campus;
- Procuring 20 percent of the County's electricity footprint from renewable sources;
- Launching more than 20 energy efficiency projects across the entire portfolio that will bring an estimated 5% percent reduction to the County's energy footprint.

Through our benchmarking efforts, we will continue to be good stewards of Cook County resources and the environment. These efforts can lead to healthier communities across Cook County.

Sincerely,

Jamie J. Meyers

Cook County Energy Manager

Ann P. Kalayil

Bureau Chief

Bureau of Asset Management

"We have reduced energy usage by 14 percent in Cook County-owned facilities since we began reporting and tracking our energy data in 2013. Reducing our reliance on energy – and reducing our consumption of water – saves natural resources, reduces emissions and lowers utility expenses. Local action is key to protecting our planet and Cook County is committed to being a good steward of the environment."

—Cook County Board President Toni Preckwinkle

Bureau of Asset Management's Green Buildings Program

The Green Buildings Program (GBP) looks holistically at the design, space utilization, operations and life cycle impact of County owned properties to become a model for sustainable asset management that minimizes environmental impacts, improves the health and wellness of communities, and increases the value of County assets to optimize taxpayer dollars.

The 5 Pillars of the Green Buildings Program

Every change made to County properties should use these pillars and goals as part of the decision making process.

				
<p>Goal</p>	<p>Goal</p>	<p>Goal</p>	<p>Goal</p>	<p>Goal</p>
<p>80% emissions reduction by 2050</p>	<p>30% water usage reduction by 2025</p>	<p>80% diversion rate by 2050</p>	<p>80% of buildings to incorporate smart building technology by 2025</p>	<p>Create a positive impact on County residents</p>

Using a point based system that evaluates each capital project on its adherence to the pillars and associated goals, a Facility Sustainability Condition Index score, from 0 (worst) to 100 (best), will be generated for each project. Year-over-year improvement of the average score will be a **Key Performance Indicator** for evaluating program success. 2018 will be the baseline year.

2018 Green Buildings Program Initiatives

<p>Pilot energy savings through behavior change</p> 	<p>Create a list of water conservation measures for the Department of Corrections Campus</p> 	<p>Establish a baseline diversion rate for waste</p> 	<p>Develop standards and roadmap for smart building development</p> 	<p>Conduct Green Building Assessment on all major properties and campuses</p>

Did you know?

Cook County is part of the Department of Energy's [Better Buildings Challenge](#), whereby organizations pledge to reduce portfolio energy usage by 20% over a 10 year timeframe.

Cook County has reduced energy usage **14%** from its baseline year of 2013.

Energy Star Score

is an EPA metric to assess how buildings and facilities are performing². The score normalizes billed energy and business operations to compare like building types' year to year energy usage data.

ENERGY STAR SCORE PERFORMANCE

2017 High Performing Buildings by Energy Star Score included:

- Skokie Courthouse
- Dunne Building
- Rolling Meadows Courthouse

A score eligible for Energy Star certification is 75 and above. Certain building types, campuses, etc. are not eligible for Energy Star Score calculations. Data for the Cook County Portfolio can be seen in Appendix A.

Table 1. Facilities Reporting an Energy Star Score

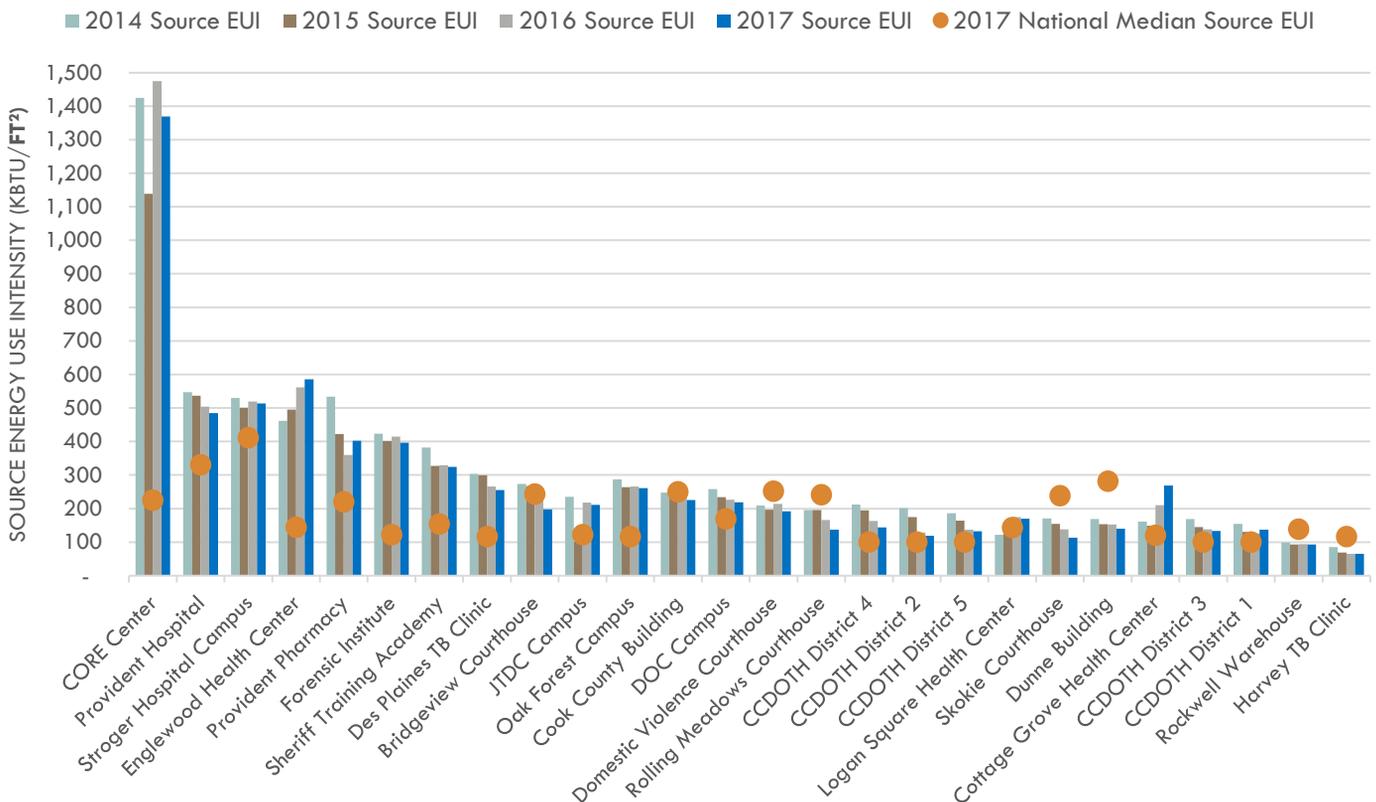

Facility	Energy Star Score 2013	Energy Star Score 2014	Energy Star Score 2015	Energy Star Score 2016	Energy Star Score 2017

SOURCE ENERGY USE INTENSITY BY FACILITY

Source Energy Use Intensity (EUI) looks at total energy including production, usage, and distribution over the total site footprint. As not all property types qualify for Energy Star Score calculation, Source EUI is the comparison tool used for full portfolio evaluation.

Figure 3. Source Energy Use Intensity (kBtu/ft²) by Facility

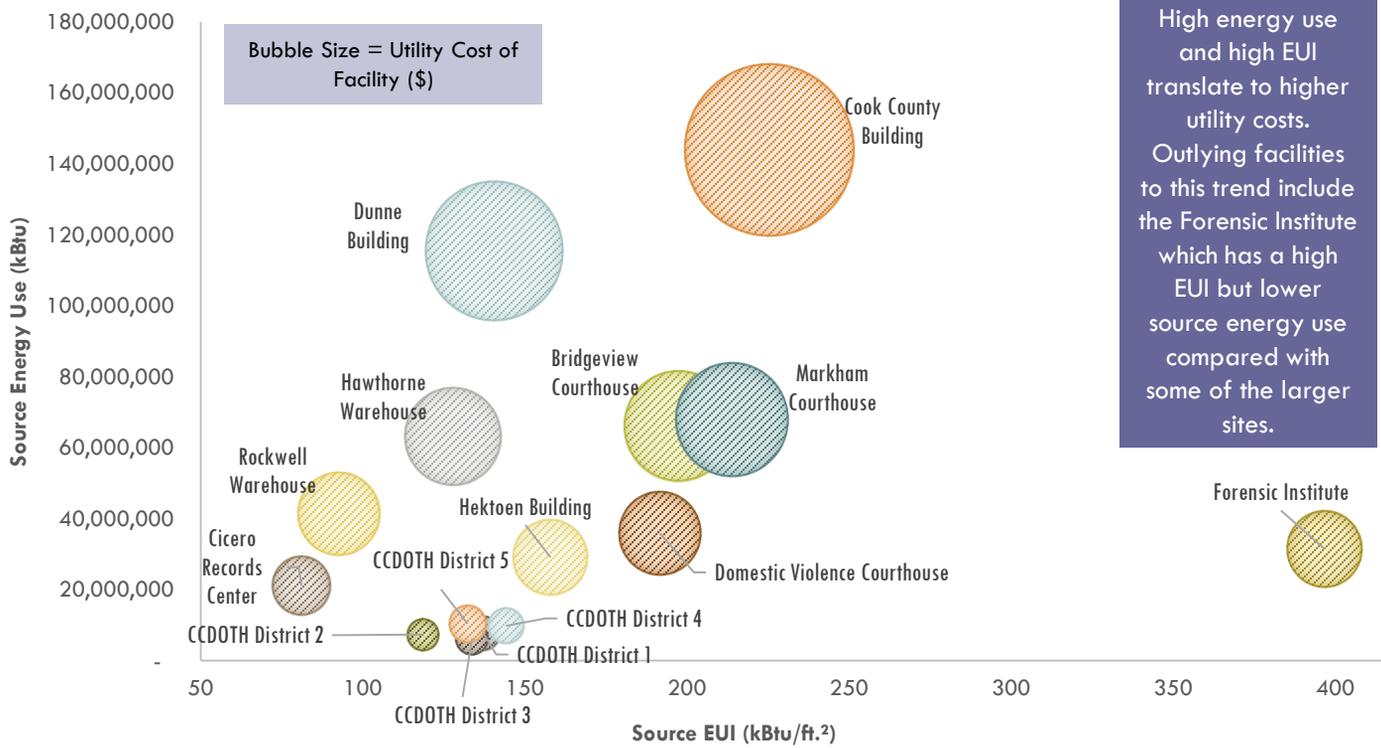

This figure looks at top Source EUI sites across the portfolio compared with national median values. 30% of facilities performed better than the national median in 2017. Some of these include the Bridgeview, Domestic Violence, Rolling Meadows, and Skokie Courthouses, Dunne Building, County Building, Rockwell Warehouse, and Harvey TB Clinic.

For facilities not eligible for an Energy Star Score, the metric Source Energy Use Intensity (EUI) is used as the benchmarking value for year to year comparison.

IMPACTS OF ENERGY USE INTENSITY ON COSTS

High performing buildings tend to have lower EUI values and lower costs meaning they utilize the energy needed per square foot of occupied space efficiently. An example of a site that consumes a significant amount of energy but efficiently uses the space is the Dunne Building. When compared with like facilities, this efficiency is evident by a lower EUI value and lower costs.

FIGURE 4. SOURCE ENERGY USE, ENERGY USE INTENSITY, AND UTILITY COST BY FACILITY

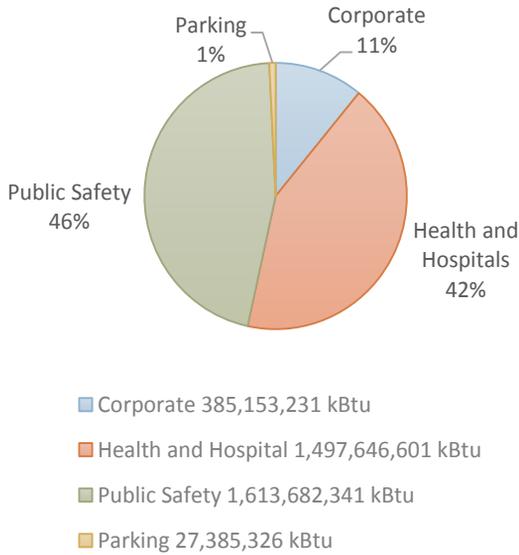

High energy use and high EUI translate to higher utility costs. Outlying facilities to this trend include the Forensic Institute which has a high EUI but lower source energy use compared with some of the larger sites.

The DOC Campus, Stroger Hospital Campus, and JTDC Campus were left off this chart as they are the three highest energy users and would skew the data because they are large campuses rather than single buildings. Energy use for these campuses can be found in the Appendix.

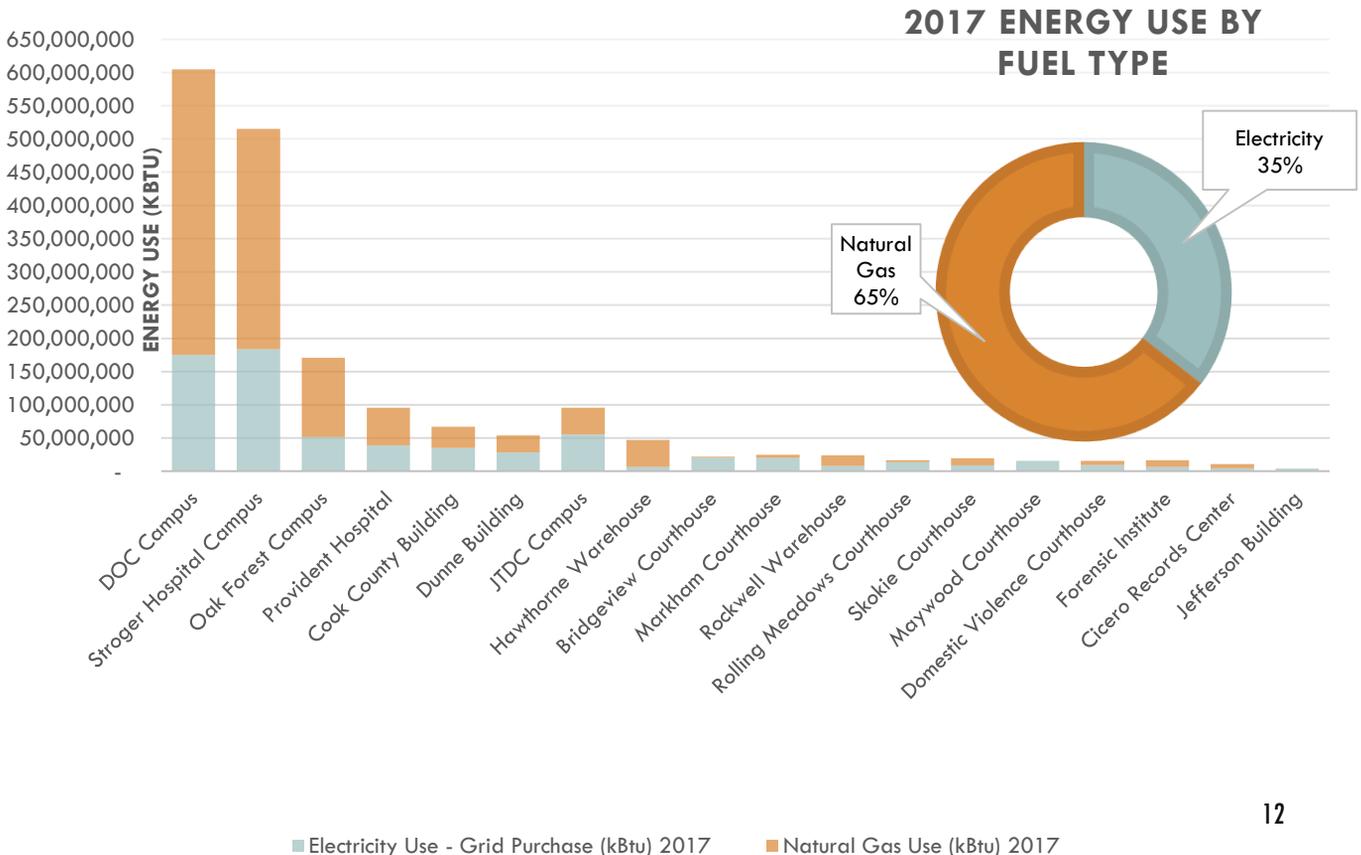

SOURCE ENERGY USE BY PORTFOLIO

Figure 5. 2017 Source Energy by Building Portfolio

The type of energy used to operate a building determines overall emissions and consumption costs. GHG emissions from electricity are higher than those from natural gas in Illinois. In recent years, Cook County facilities have shifted toward using more natural gas (3% increase from 2016) and less electricity (3% decrease from 2016). Figure 6 below shows the split between electricity and natural gas usage for Cook County sites that use the most energy and across the portfolio.

FIGURE 6. FACILITY ENERGY USE BY FUEL TYPE

Des Plaines Thermal Wall

As part of the Guaranteed Energy Performance Contract, Cook County installed thermal wall technologies at Department of Transportation and Highways facilities to reduce natural gas usage. This is a passive system in which air is heated by the sun within a cavity in the building wall. As the air warms and rises, fans blow the hot air into the garage space to supplement heating needs. This reduces general HVAC energy and natural gas usage required to heat these spaces. Annual estimated savings for natural gas are equivalent to powering 32 homes for one year.

CARBON REDUCTION AT COOK COUNTY OWNED FACILITIES

Total GHG
Emissions
2017

91%
of Sites
Reduced GHG
Emissions from
2016-2017

10%
Total GHG
Reduction
from 2016-
2017

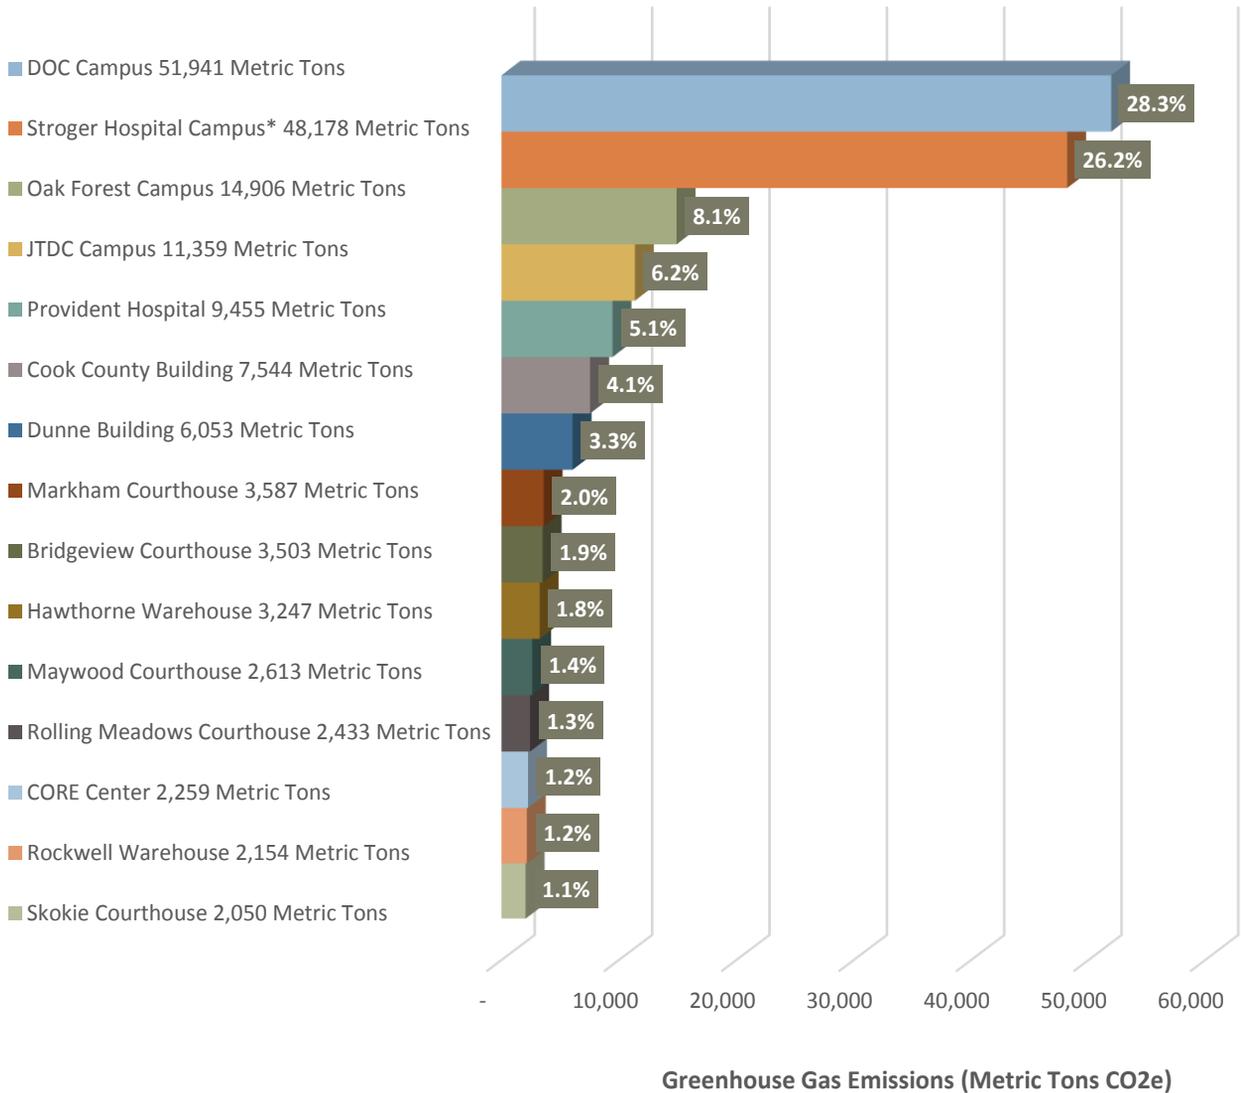

Did you know?

Cook County has reduced Greenhouse Gas (GHG) emissions by 10% or 21,165 metric tons CO₂e from benchmarked buildings over the last year. Emissions savings resulted from energy efficiency upgrades, renewable energy integration, and portfolio consolidation.

**Cook County has a goal to reduce
GHG emissions 80% by 2050
from 2010 values***

GREENHOUSE GAS EMISSIONS BY FACILITY

Figure 7. Percent of Total GHG Emissions by Facility

Of the benchmarked buildings, the two highest GHG emitting sites in Cook County’s building portfolio are the DOC Campus and Stroger Hospital Campus. This chart includes the top 15 sites for GHG emissions. The remaining buildings in the portfolio not included on this chart make up about 6.7% of total portfolio emissions.

*Stroger Hospital Campus includes Stroger Hospital, the JSH Powerhouse, JSH Parking Structure, Fantus, and CCHHS Administration Building

GREENHOUSE GAS EMISSIONS VS. NATIONAL MEDIAN

Facilities that performed better than the 2017 national median include the Dunne Building, Rockwell Warehouse, Skokie Courthouse, Rolling Meadows Courthouse, Hektoen Building, Sheriff Central Warrants, and Englewood Health Center. The national median for each facility differs based on sector type and building size.

Figure 8. Total Greenhouse Gas Emissions vs. National Median

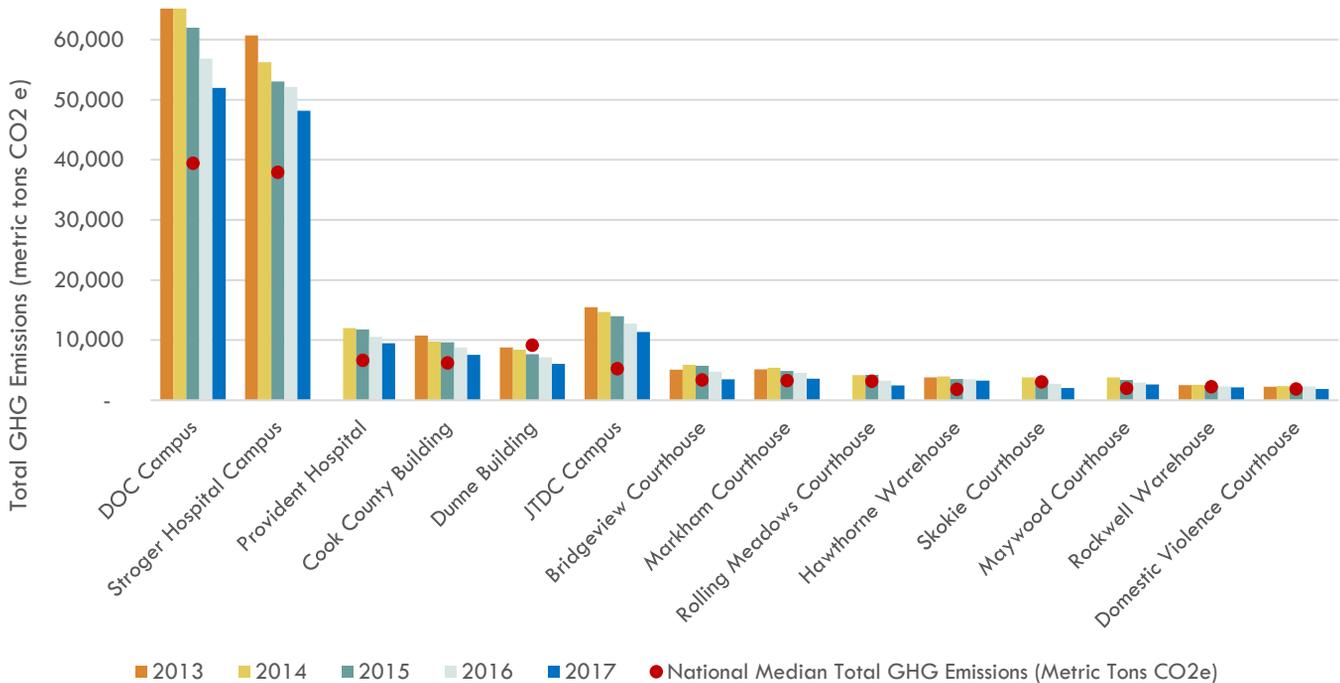

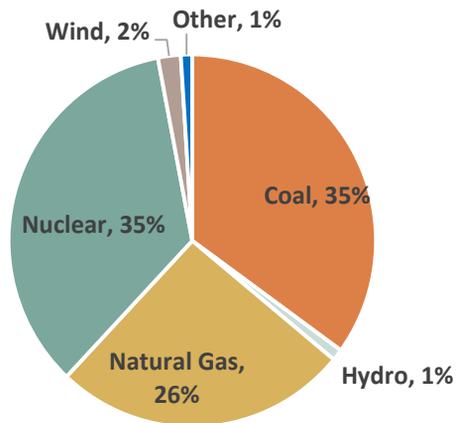

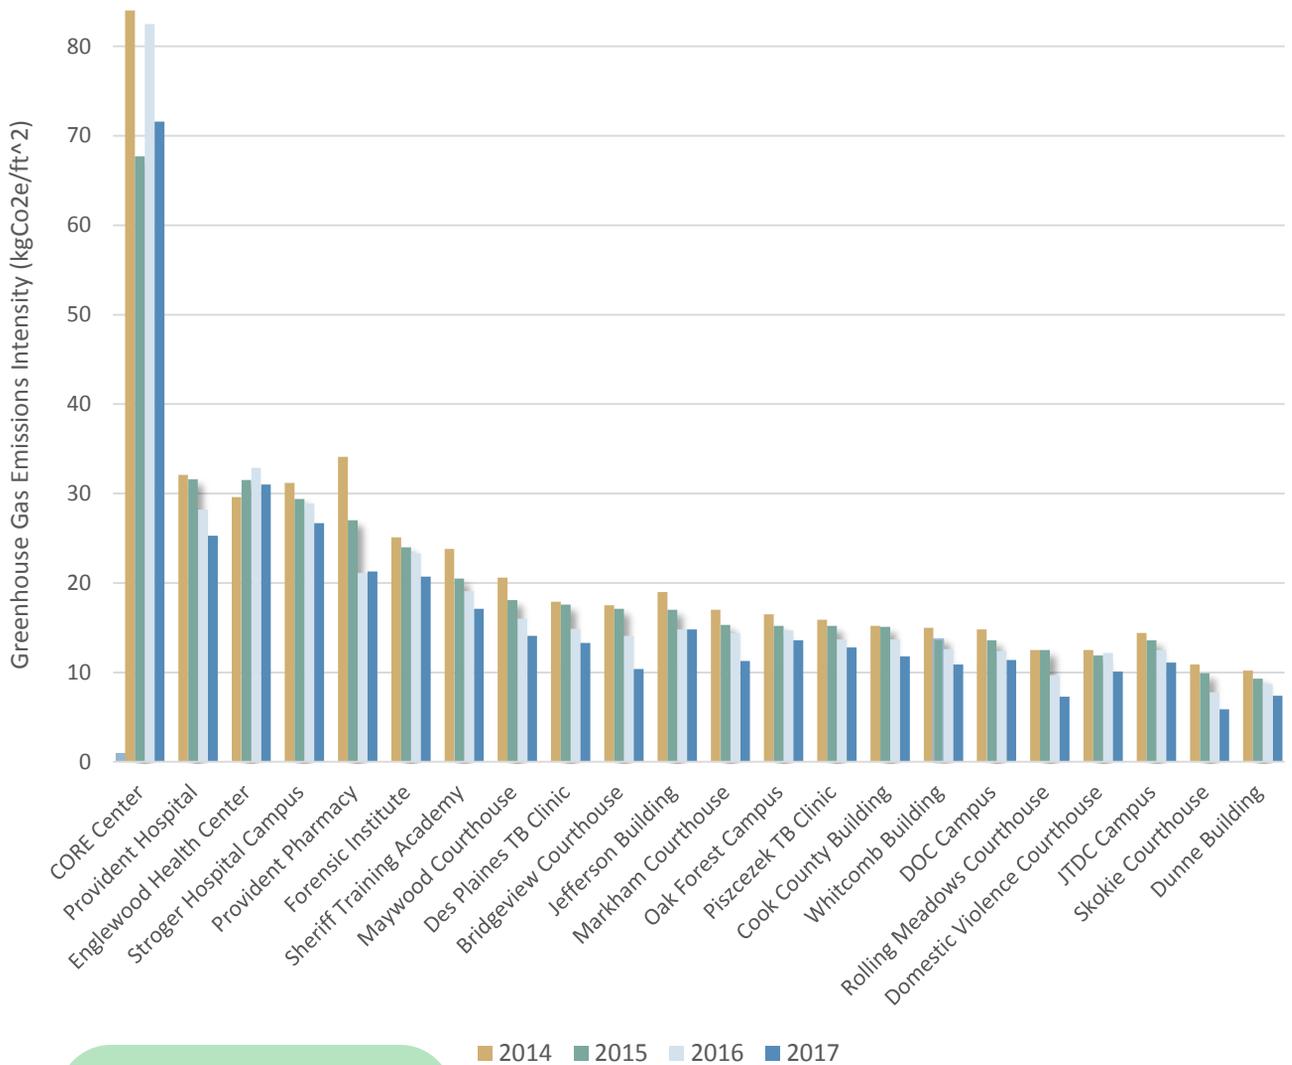

Figure 9. 2017 ELECTRICITY GRID COMPOSITION (COMED)

The County gets its electricity from the [ComEd energy grid mix](#). Nuclear and coal fuel sources make up the majority of this grid. As more renewable energy sources are added to meet requirements from the Future Energy Jobs Act, greenhouse gas emissions will be reduced at the grid level as well as at daily operational levels.

GREENHOUSE GAS EMISSIONS INTENSITY

Figure 10. Greenhouse Gas Emissions Intensity (kgCO₂e/ft²)

Greenhouse gas intensity expresses total emissions on a per square foot basis with units (kgCO₂e/ft²)

This figure highlights the general improvement in greenhouse gas emissions intensity across the majority of facilities. Outlying high GHG Intensity values such as the CORE Center reveal areas for improvement.

ENERGY SERVICE CONTRACT (ESCO) HIGHLIGHTS

2014-2017 Upgrades to County facilities included: DOC Campus, JTDC Campus, Stroger Hospital Campus, Dunne Building, County Building, Bridgeview, Markham, Rolling Meadows, and Skokie Courthouses, and DOT Highway Maintenance Facilities.

Upgrades Included:

- Boiler and Chiller Replacements
- Natural Gas DHW Heaters
- New AHU Fans and VFDs
- RTU Replacements
- Building Automation Systems and Controls
- Piping
- Geothermal Ground Source Heat Pump
- Water Conservation
- Solar PV
- Thermal Walls
- Heating System Upgrades
- EV Charging Stations
- N2 Tire Filling Stations
- LED Lighting Upgrades

Benefits: 20 years of savings pay back the investments. Packaging projects maximizes emissions savings for energy efficiency projects.

usage from
2016-2017

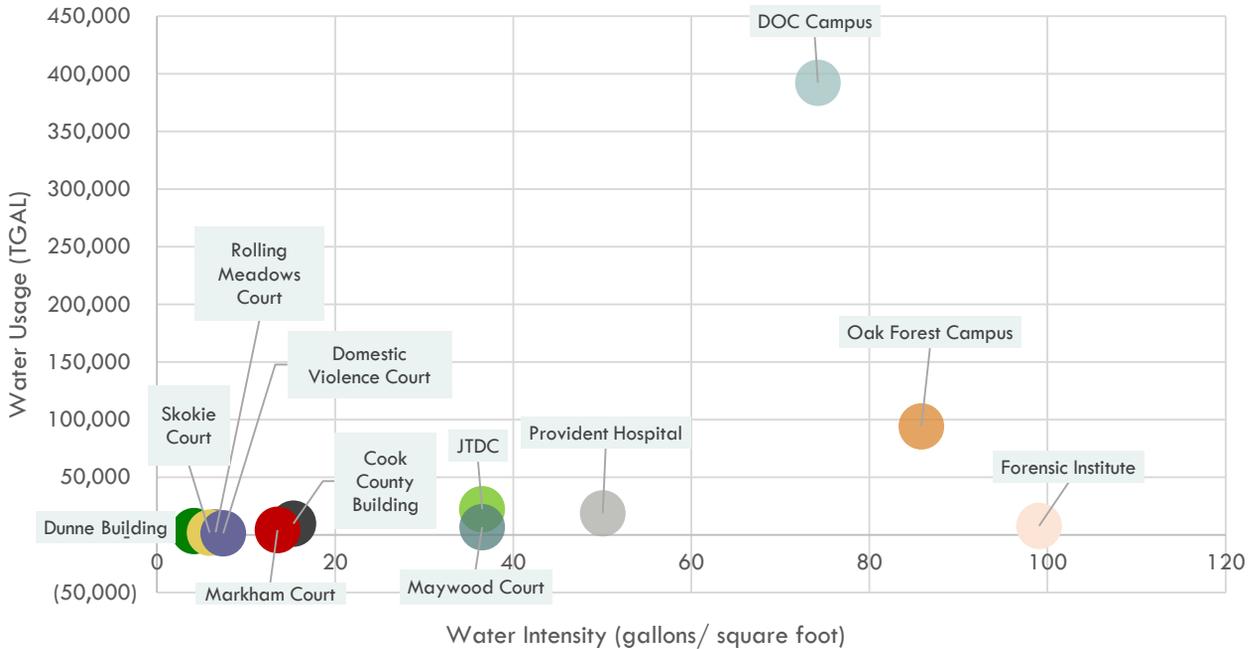

Did you know?

This is the second full year of water data reported for Cook County's Portfolio of buildings.

Cook County has a 30% water reduction goal by 2025

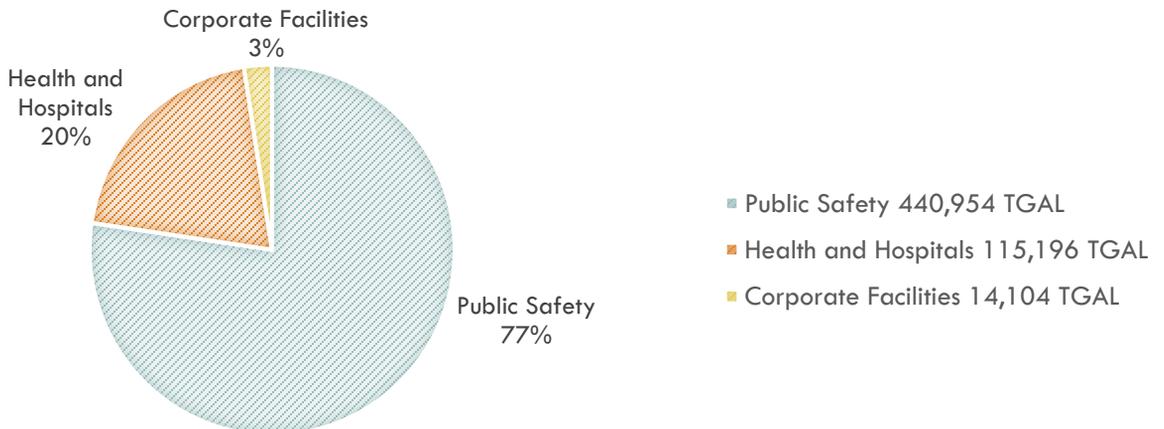

WATER USAGE

FIGURE 11. COMPARISON OF WATER USE AND WATER USE INTENSITY

Total water consumption and water use intensity (use over occupied area) provide metrics for improvement planning. High water usage and high water use intensity can coincide but this is not always the case. For example, the Forensic Institute consumes less water but has a higher water use intensity which indicates further analysis for improvement.

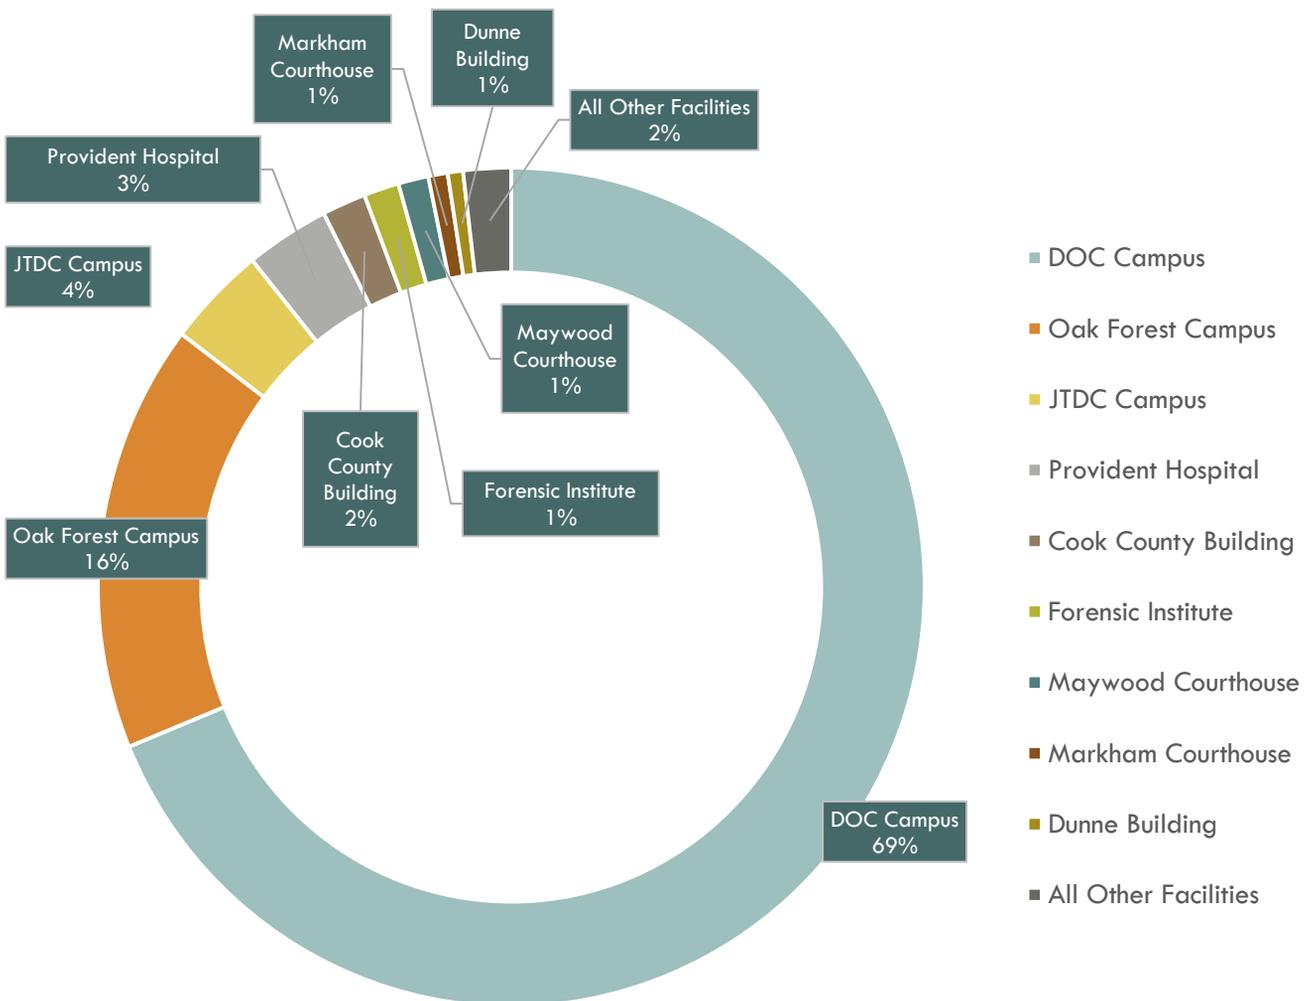

FIGURE 12. TOTAL WATER USE BY PORTFOLIO

PERCENTAGE OF WATER USAGE BY FACILITY

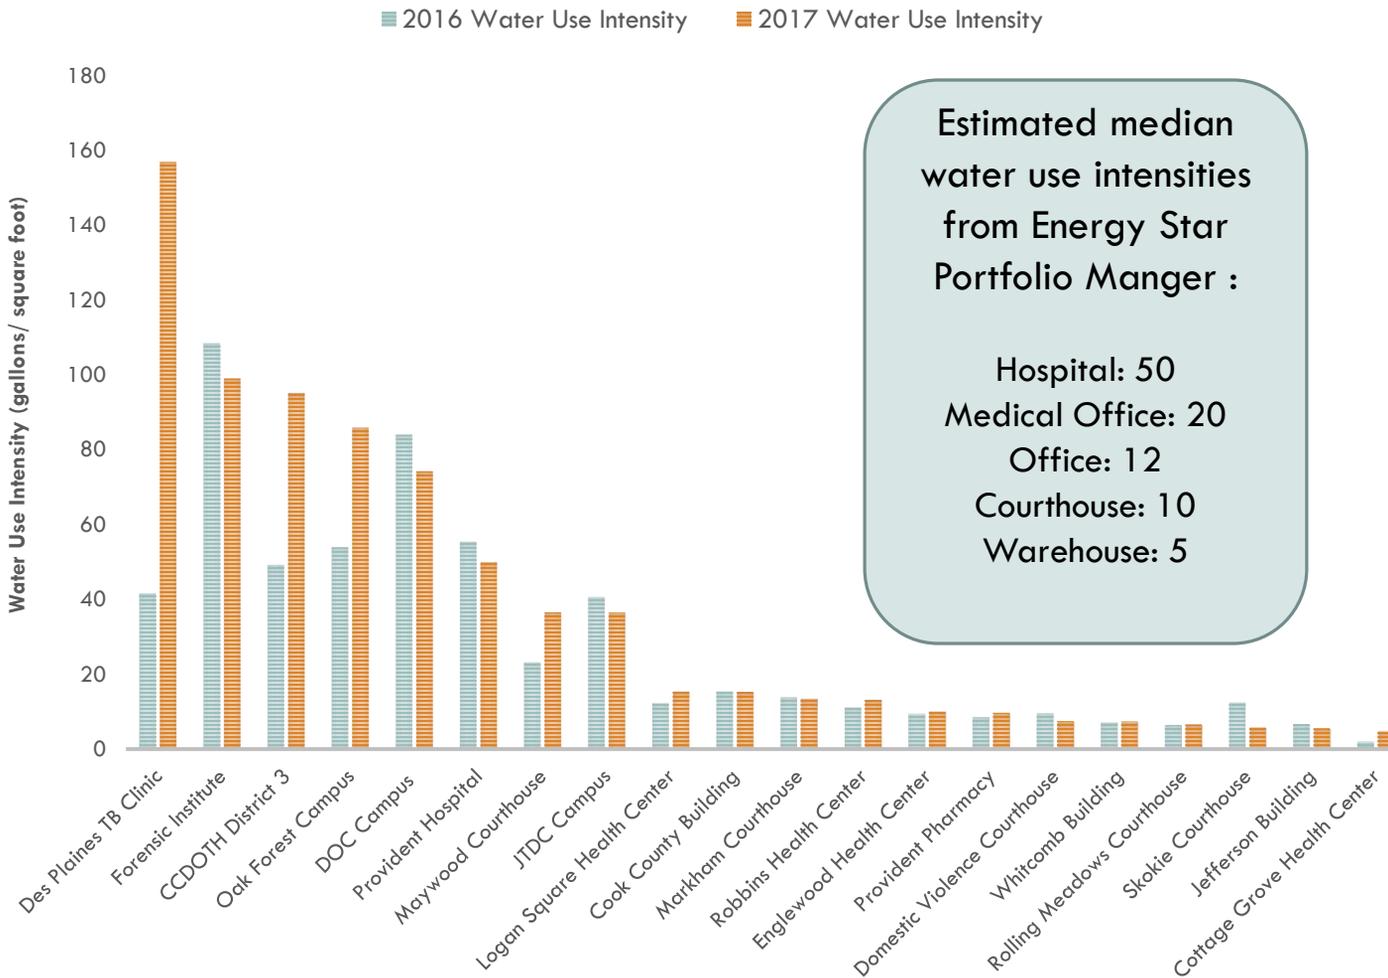

This figure shows the water use breakdown over the County portfolio. The highest water consumption occurs at the DOC campus which makes up 69% of water usage within the portfolio. Oak Forest Hospital and JTDC Campus are also high water consumers.

Figure 13. Percent of Water Use by Facility

WATER USE INTENSITY

FIGURE 14. WATER USE INTENSITY 2016-2017

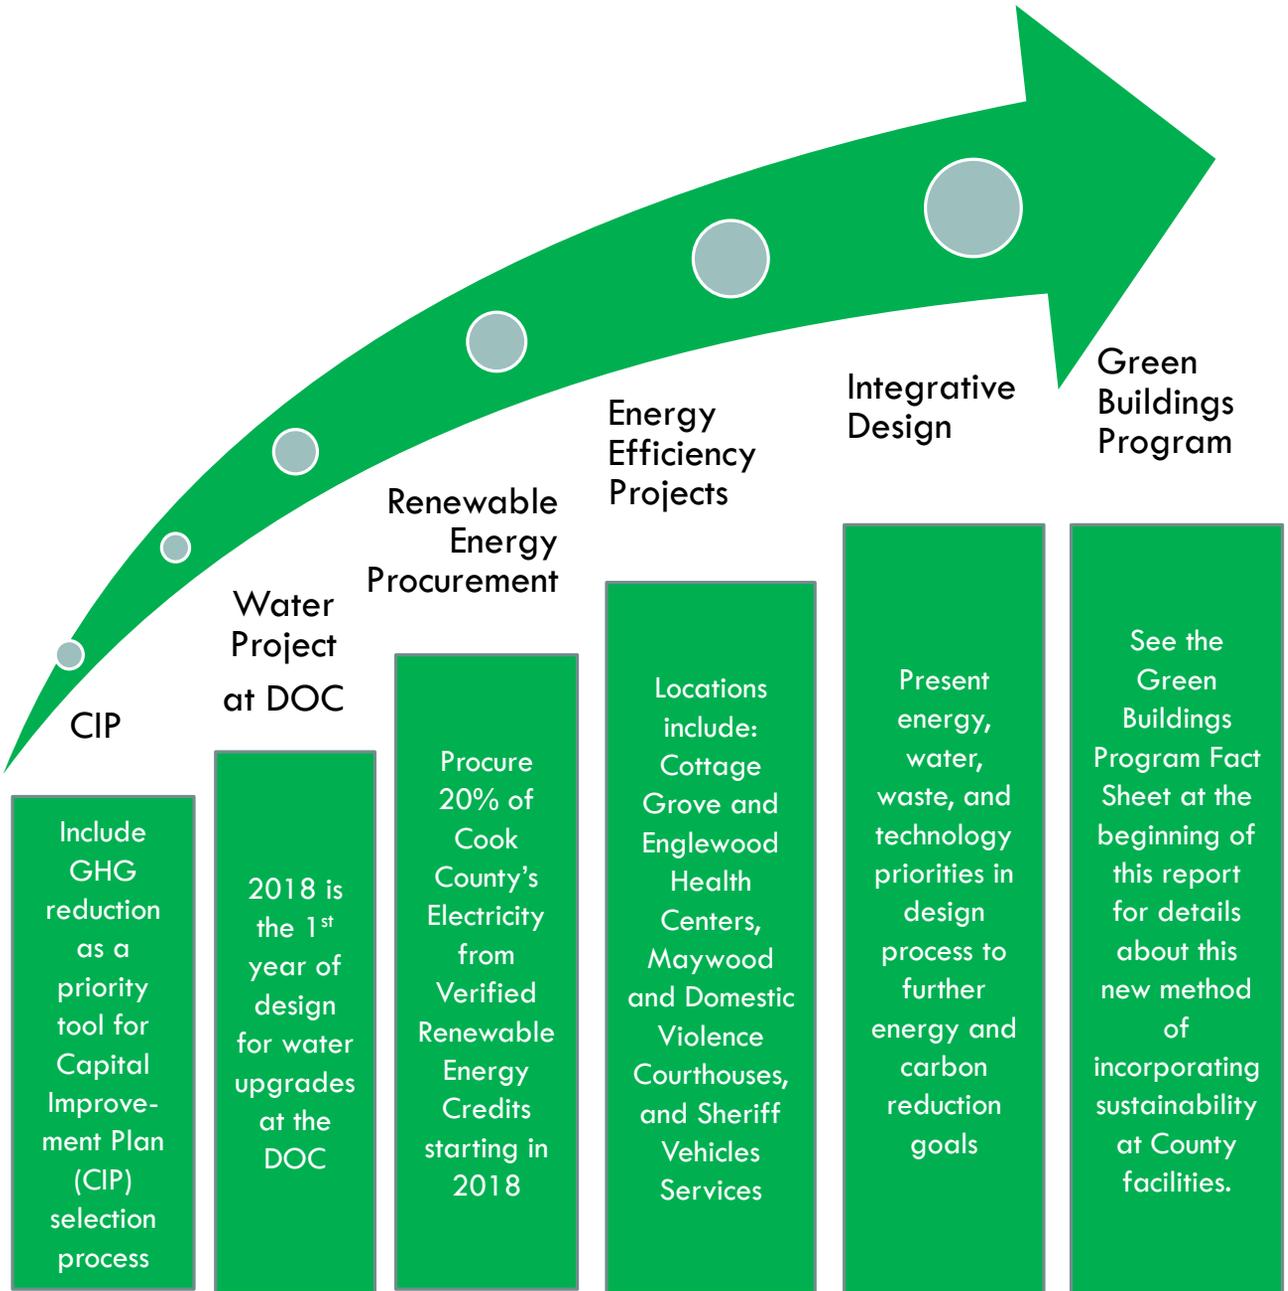

Water intensity is a similar metric to energy use intensity that compares total water usage over the size of the facility. This footprint impact can highlight inefficiencies in infrastructure design or areas for further submeter analysis to conserve the most water. Facilities with an increase in use intensity may require further analysis to detect leaks or operational changes.

Water Efficiency Highlight: Dunne Building Restroom Fixtures

One of the new construction projects in 2017 was the remodeling of the 22nd floor of the George W. Dunne Building. New AER-DEC sink fixtures in the restrooms are up to 67% more efficient at saving water than non-automatic fixtures, and the in sink dryers reduce energy use about 80% with shorter dry times than traditional hand dryers. Automatic high efficiency toilet and urinal fixtures installed in recent projects also reduce water usage in the building by approximately 29%.

Appendix D: Assumptions for Calculations

- **Energy:**

Source energy is used for all performance metrics in Cook County's portfolio for the 2017 Benchmarking Report. Source energy accounts for losses that are incurred in the storage, transport, and delivery of fuel to the building.

- **GHG Emissions:**

This report looks only at building greenhouse gas Scope 2 emissions from electricity and natural gas use. Greenhouse gas percentage values may differ from 2010 reduction goals to achieve the 80% reduction by 2050 as not all buildings are benchmarked and the baseline years differ. The first Benchmarking Report was issued in 2013 and additional facilities were phased in during subsequent years based on square footage brackets determined in the Benchmarking Ordinance. Therefore, benchmarking uses year to year comparisons for GHG emissions as the most accurate method.

- **Water:**

Water usage data was compared on a building by building basis to get a full year of data. As water billing happens at different frequencies rather than monthly, annual totals were calculated based on a full year coherent with the facility's billing cycle. Since this is only the second full year of water data, outlying values are in progress of being understood and for the time being are assumed to be different than expected due to billing differences, infrastructure leaks, etc.
