

Cook County Policy Roadmap

Connected Communities

Goal:

Provide innovative infrastructure that will connect people and communities to increase equity, support economic growth, and improve residents' quality of life.

Public Infrastructure & Technology

Public infrastructure provides channels for transporting clean drinking water, information, goods, and residents. Effective infrastructure systems should be robust, inclusive, and sustainable and simply allow residents to seamlessly conduct their everyday lives. However, achieving and maintaining that level of functionality requires constant innovation and collaboration.

Objectives:

1. Promote innovative land and water projects that support an equitable and growing economy.
2. Provide equitable access to digital services for County residents in their homes and communities.
3. Increase regional accessibility and connectivity by investing in sustainable transportation throughout Cook County.

Connected Communities Programs Have Included . . .

- [Digital Equity Action Plan](#)
- [Invest in Cook](#)

OUP will foster Connected Communities by:

- promoting land and water projects;
- investing in sustainable transportation and digital infrastructure; and
- implementing a wide range of cross-functional initiatives that include physical improvements to public facilities, and water and sewer system upgrades.
